

SharperProfile

AI-ASSISTED PORTFOLIO BUILDER

Your résumé is a list. Your portfolio should be a story.

I built a tool that turns any résumé into a live portfolio site in minutes, using your own AI keys and publishing to your own Vercel account.

SWIPE THROUGH THE BUILD →

THE PROBLEM

Recruiters skim résumés in seconds. They rarely see the real story.

A résumé is a list: dates, titles, bullet points. It's built for scanning, not for showing the actual depth of your work. A live portfolio site does that job better, but building one usually means hours of design work, a template you have to fight with, or handing your résumé to yet another SaaS.

List

What a résumé gives a recruiter

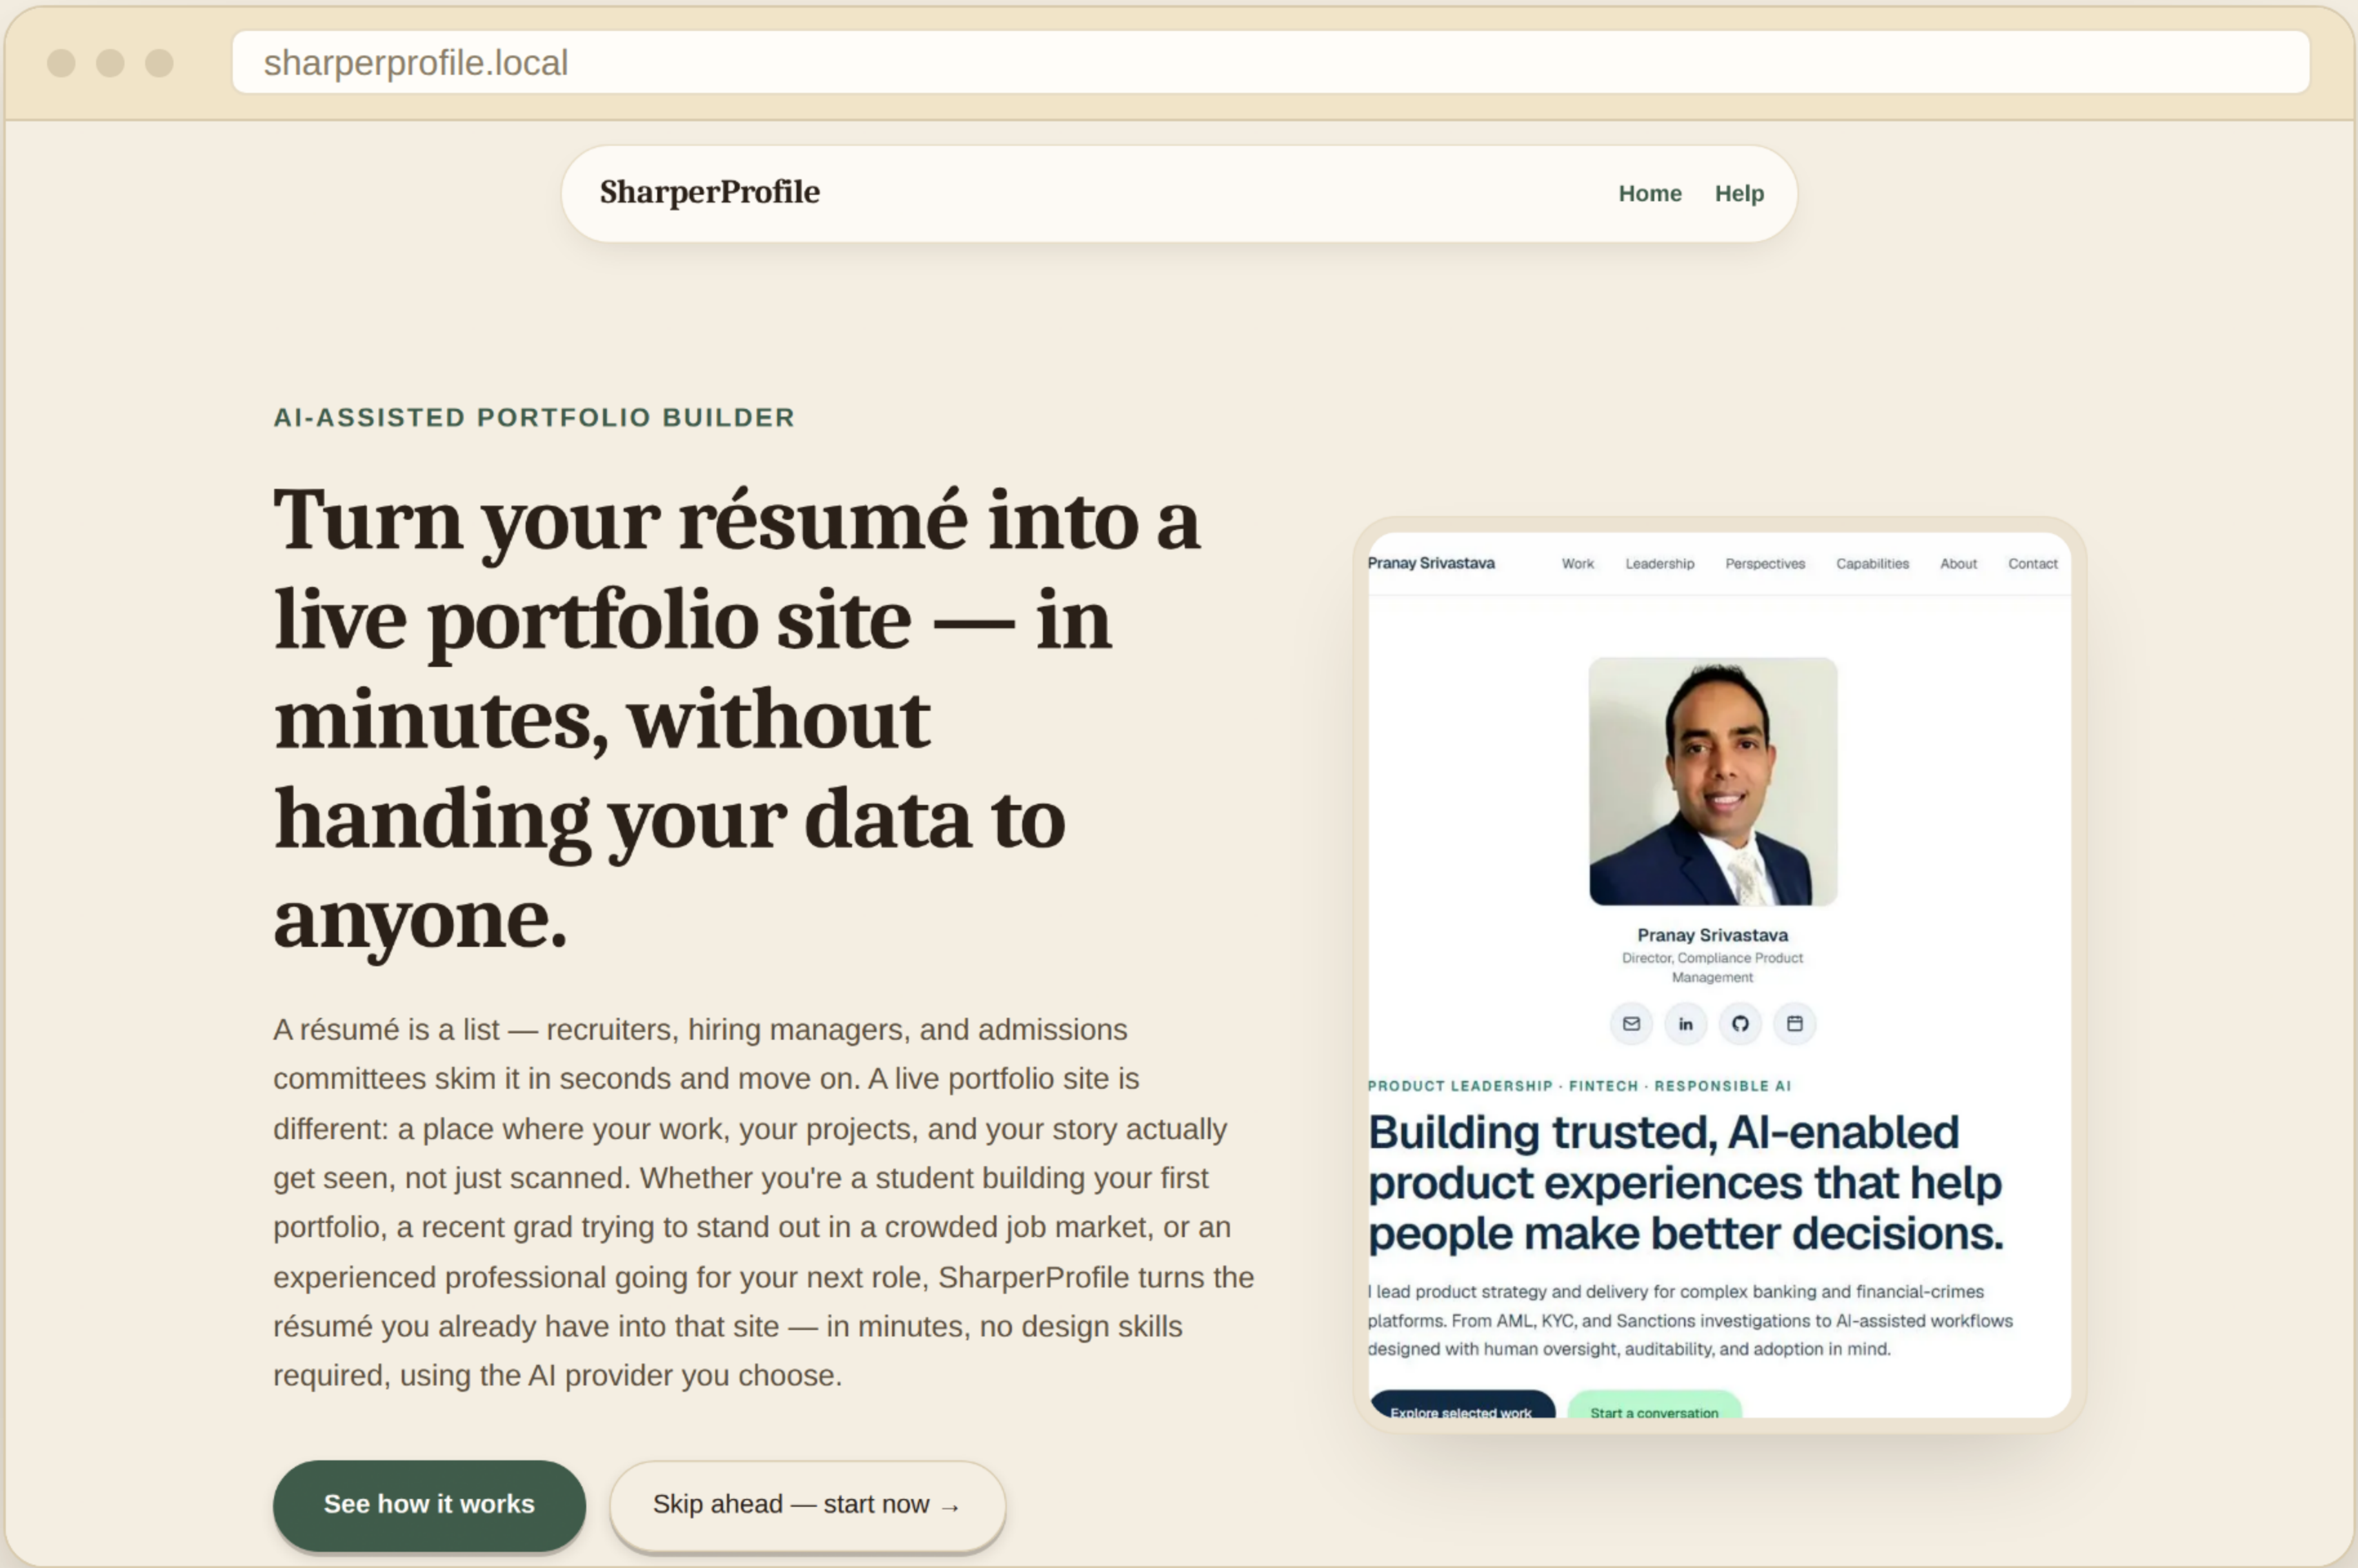

Story

What a portfolio site gives them instead

THE IDEA

Meet SharperProfile.

A four-step wizard that turns the résumé you already have into a live portfolio site. No design skills, no template to fight with.

BUILT TO BE EASY

Four steps. One decision at a time.

Every screen asks for exactly one thing, saves as you go, and uses plain language instead of jargon. You don't need to know what a build pipeline is to use this.

1 Upload

Drop in a résumé and get real facts read back to you in seconds.

2 Sections

Checkboxes, not a blank canvas. Every choice saves the moment you make it.

3 Generate

One dropdown picks your AI provider. Nothing else to configure.

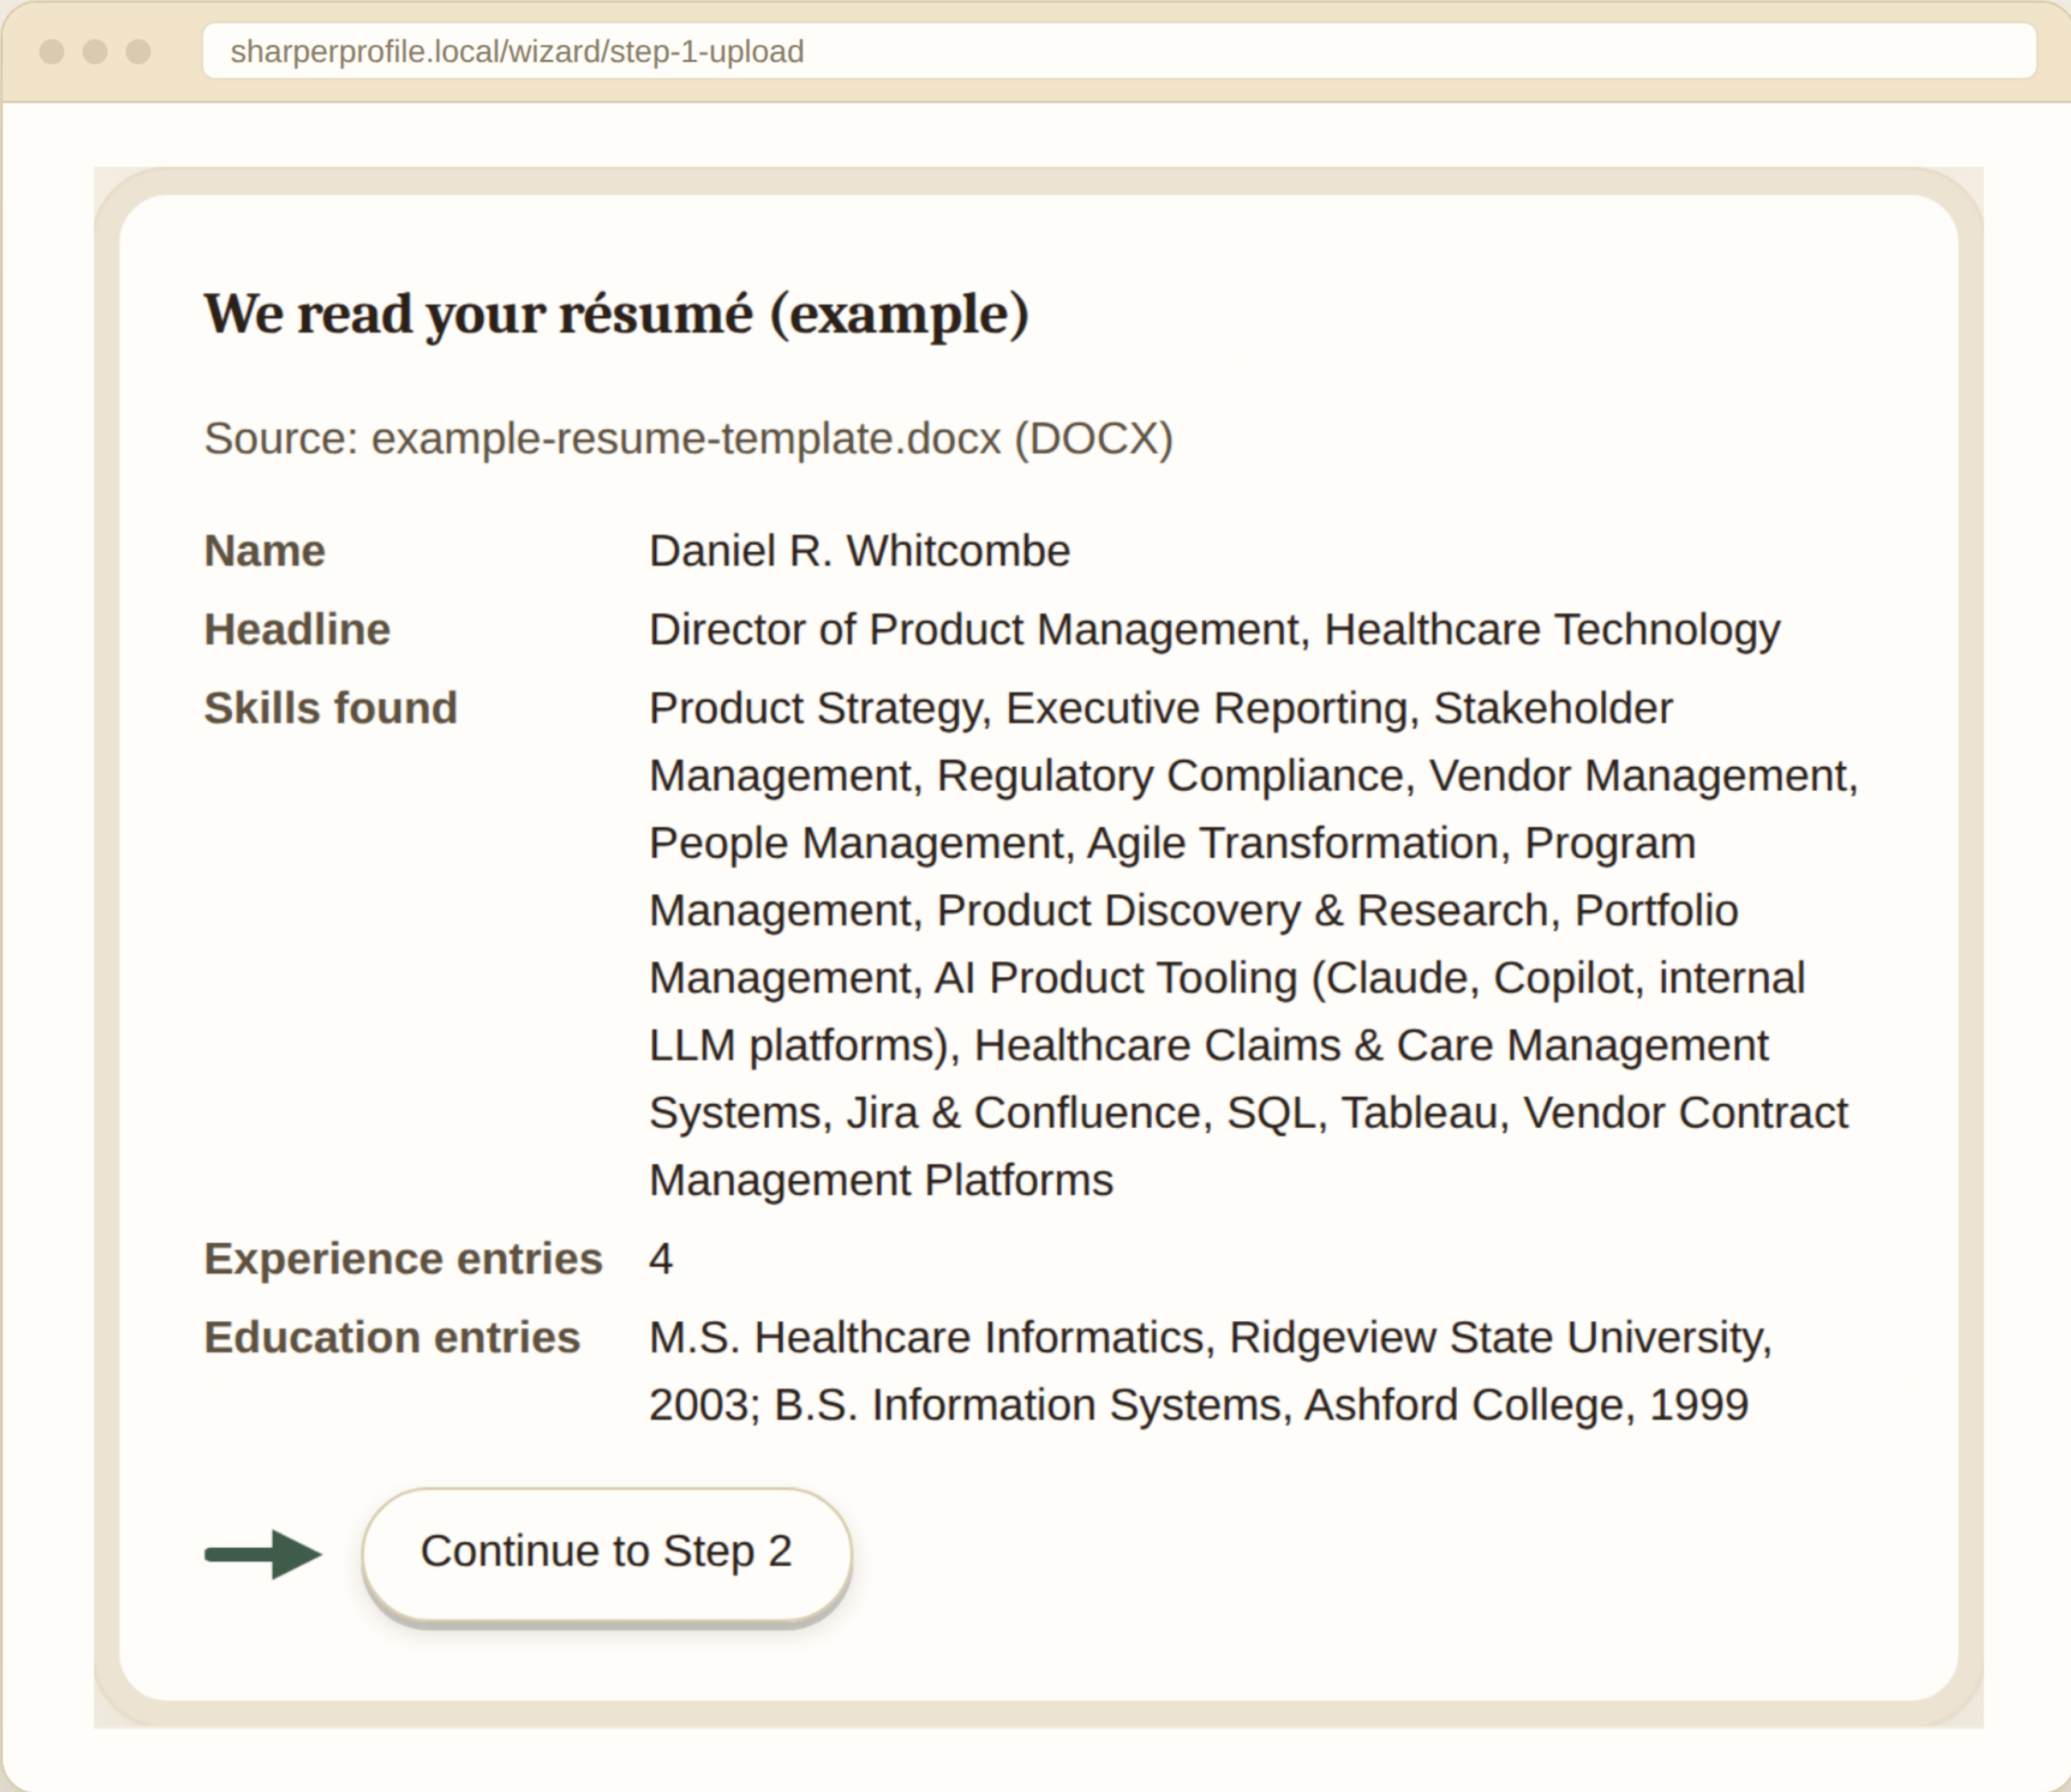

4 Publish

Paste a token, click once, and your link is live.

No tutorial required

Upload your résumé. It reads the real facts.

Name, headline, skills, and experience, extracted straight from the file. Nothing here is invented: it's parsed, checked, and shown back to you before anything gets generated.

Choose exactly what goes on your site.

Auto-filled sections use only what's already in your résumé. AI-written sections are clearly labeled, so you always know what's a fact and what's generated.

1 Upload résumé

2 Sections & photo

3 Generate Draft

4 Connect Vercel

Save / Export

Import a saved draft

Step 2 — Sections & photo

Continuing from the example résumé. Choose which sections your site should include, and optionally add a headshot for the Hero section. Every choice here saves automatically — there's nothing separate to save before moving on.

Sections

"AI-written" sections are generated from your résumé in Step 3. "Auto-filled" sections are built directly from what you've already provided — we never let AI invent numbers, logos, or credentials.

☒ Hero (name, headline, photo) ? AUTO-FILLED

Your name, headline, and headshot — filled in automatically from Step 1 and the photo below.

☐ Metrics ? AUTO-FILLED

Key numbers you want to highlight. Auto-filled with an empty, editable placeholder — we don't let AI invent numbers.

☒ Featured Work ? AI-WRITTEN

One card per role from your résumé, AI-written from your actual experience.

☐ How I Work ? AI-WRITTEN

3 steps describing your working style, AI-synthesized from patterns across your experience.

☐ Topics & Interests ? AI-WRITTEN

2-4 topics grounded in your résumé, AI-generated.

☐ Certifications & Credentials ? AUTO-FILLED

Auto-filled from the certifications on your résumé — we don't let AI invent credentials or logos.

☒ Skills ? AI-WRITTEN

Your extracted skills, AI-grouped into labeled categories.

☒ Bio & Career Timeline ? AI-WRITTEN

A short bio plus your career timeline, AI-written from your actual experience.

☒ Contact ? AUTO-FILLED

A contact section — auto-filled with your extracted email and standard copy.

Headshot (optional)

SharperProfile

06 / 11

Bring your own AI. Bring your own keys.

Claude, a local Ollama model, or another provider: pick one from a dropdown and only that provider's setup shows up. Your résumé and your keys stay with the provider you picked, not with a third party you've never heard of.

3 Generate Draft

4 Connect Vercel

Save / Export

Import a saved draft

Step 3 — Provider & generate

Choose an LLM provider (if you selected any AI-written sections), then generate your draft.

Provider

Choose a provider

Anthropic (Claude) — Configured

Already configured: Anthropic (Claude).

Anthropic (Claude) ? CONFIGURED

sk-ant-...

Save

Clear

From console.anthropic.com — Account Settings → API Keys.

Generate

This regenerates every selected section at once — there's no partial/single-section regenerate yet.

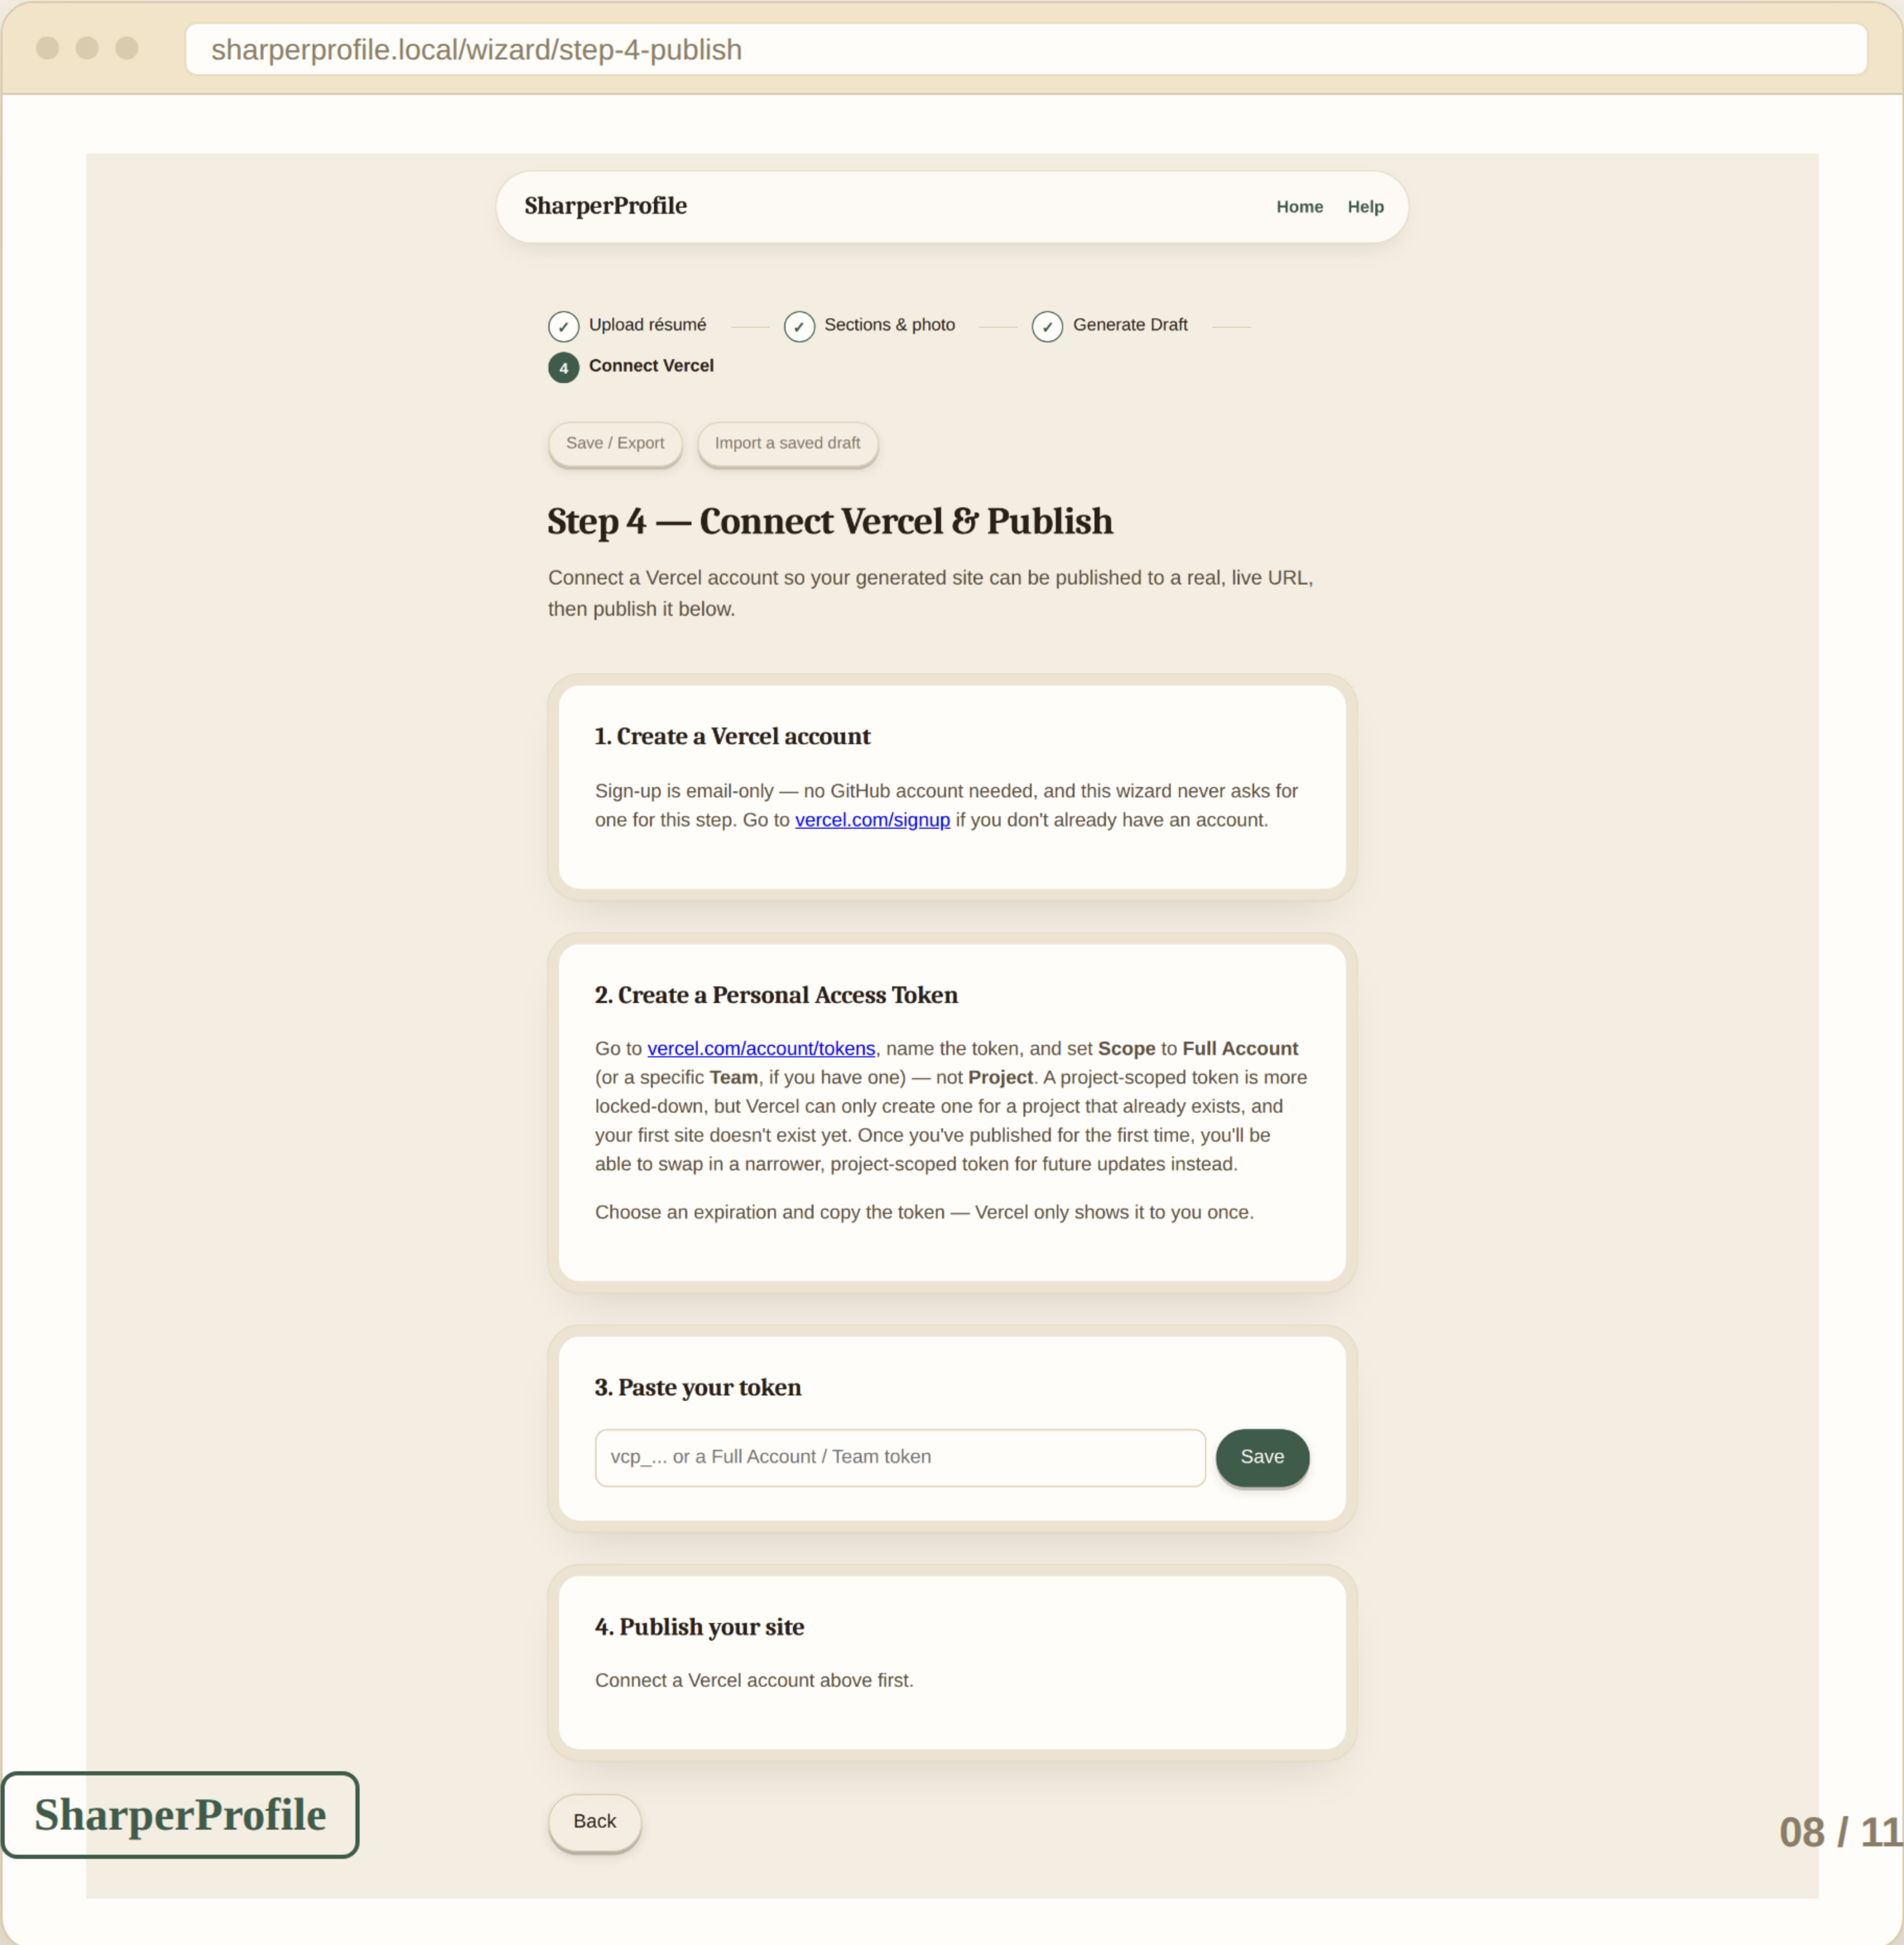

Back

Generate

Click Generate above to create your first draft — this is where you'll review and edit each section.

Publish straight to your own Vercel account.

Email-only sign-up, a personal access token, and the site goes live under an account you control, not a platform that owns your link.

WHY IT'S DIFFERENT

Three key design principles.

TRANSPARENT BY DEFAULT

Every AI-written section is labeled clearly, so you always know what's fact and what's generated.

YOU STAY IN CONTROL

Your AI provider, your Vercel account, your domain. Nothing routes through a platform I control.

GROUNDED IN YOUR RÉSUMÉ

Auto-filled sections come straight from your résumé. The tool never invents numbers, titles, or dates.

Built solo, end to end.

A weekend-and-evenings project, not a funded startup. Built because I wanted to try and create a simpler way for people to stand out from the crowd when it comes to professional profiles.

STACK

Next.js + TypeScript, deployed through the same Vercel flow it hands off to you.

EXTRACTION

A résumé-parsing pipeline checked against a golden set of real, varied résumés before it shipped.

LOCAL-FIRST

Runs on your own machine with a one-click launcher. Nothing about your résumé has to touch a server you don't control.

STILL EVOLVING

Actively iterated: the workflow shown here changed twice in the last week alone as I dogfood it.

LET'S TALK

Your résumé already has the story. It just needs a site.

I built this to help people get seen for their full story, not just a bullet-point summary. If you're job-hunting, building a portfolio, or just curious how the extraction pipeline works under the hood, I'd love to hear from you in the comments.
